POWER2X JOINS IATA FUEL SERVICES STRATEGIC PARTNERSHIPS PROGRAM

Power2X today announced that it has joined the Fuel Services Strategic Partnerships Program of the International Air Transport Association (IATA), strengthening its engagement with the global aviation industry and reinforcing its commitment to supporting the sector's transition toward more sustainable air transport.

Through the program, Power2X will collaborate directly with airlines, fuel suppliers, and industry experts to support the development of reliable, scalable, and future-ready aviation fuel solutions. The partnership creates new opportunities to contribute to discussions around fuel supply, operational efficiency, infrastructure readiness, and the growth of Sustainable Aviation Fuel (SAF) across the global aviation value chain.

As part of the program, Power2X will participate in IATA's bi-annual Aviation Energy Forum, one of the industry's leading events for aviation fuel stakeholders. The forum brings together key players from across the aviation ecosystem to address market developments, industry challenges, and pathways toward long-term decarbonization.

By joining the program, Power2X further strengthens its position as a long-term partner to the aviation industry, focused on delivering scalable low-carbon fuel solutions that combine industrial expertise, reliability, and a strong commitment to collaboration across the sector.

Commenting on the partnership, Lucas Prat, EVP SAF and Low Carbon Fuels Power2X, said:

"We are proud to join IATA's Fuel Services Strategic Partnerships Program and deepen our engagement with the global aviation community. Collaboration across the aviation value chain is essential to scaling sustainable fuel solutions, and we look forward to working closely with industry partners to help support the sector's long-term transition."

About Power2X

Power2X develops next-generation energy projects at industrial scale, supporting the decarbonization of hard-to-abate sectors through innovative low-carbon fuel solutions and strategic industry partnerships. www.power2x.com
